PERSONAL STATEMENT

I am a confident and personable individual who enjoys interacting with colleagues and customers. I am hard working and follow instructions competently. I am calm under pressure and often enjoy solving problems and finding efficient ways to work.

In July of 2016, I completed my degree in Music and Audio Technology with second class honours (2:1). As well as improving my skills in Music Technology this course had modules in programming, teaching me C++ programming, HTML web technologies and provided an understanding of other programming languages including JavaScript and C#. My degree also included business modules which gave me a greater understanding of customer service and how modern technology based businesses are run and managed.

More recently, I participated in an internship scheme where I was placed in the development team of a small but growing marketing agency. Here I strengthened my skills in HTML, CSS and JQuery and also learned new skills in PHP. Currently, while seeking a permanent position in web development, I am working personal projects and projects for friends to expand my knowledge and further solidify what I already know.
